1 Lab Overview

In this lab, students will learn how to use ClickUp as a project management tool for organizing tasks, collaborating with team members, and tracking project progress.

2 Learning Objectives

By the end of this lab, students will be able to:

- Create a ClickUp account and workspace
- Understand ClickUp hierarchy (Space, List, Task)
- Create and manage tasks
- Assign tasks and track progress
- Use statuses, priorities, and deadlines
- Collaborate with team members

3 What is ClickUp?

ClickUp is a project management tool used in real-world software development to manage tasks, track progress, and collaborate in teams.

4 ClickUp Hierarchy

- Workspace → Main environment
- Space → Project or module
- List → Group of related tasks
- Task → Individual work item
- Subtask → Smaller part of a task

5 Step 1: Create a ClickUp Account

1. Go to: `https://clickup.com`
2. Click on **Sign Up**
3. Register using your email or Google account
4. Select the **Free Plan**

6 Step 2: Create a Workspace

1. Enter a workspace name (e.g., `SE Lab Project`)
2. Choose personal/student usage
3. Skip optional steps if needed

7 Step 3: Create a Space

1. Click + **New Space**
2. Name it: `Student Management System`
3. Keep default settings

8 Step 4: Create a List

1. Inside the Space, click **Add List**
2. Name it: `Development Tasks`

9 Step 5: Create Tasks

Create the following tasks:

- Design Database
- Build Backend (CRUD)
- Develop Frontend
- Testing and Debugging

10 Step 6: Add Task Details

For each task:

- Add a description
- Assign a team member
- Set a due date
- Set priority (High/Medium/Low)

11 Step 7: Use Task Status

Update task status as you work:

- To Do
- In Progress
- Done

12 Step 8: Create Subtasks

Example:

Task: Build Backend

- Create Database
- Write CRUD Queries
- Test API

13 Step 9: Board View (Kanban)

Switch to Board View:

- Tasks are displayed as cards
- Columns represent status
- Drag tasks between columns

14 Step 10: Collaboration

- Add comments to tasks
- Mention teammates using @
- Share updates within tasks

15 Step 11: Deadlines

- Set due dates for each task
- Ensure timely completion

16 Lab Activity

Students will work in groups of 2–3.

Task 1: Project Setup

- Create a workspace
- Create a Space named `CRUD Application`
- Create a List named `Development`

Task 2: Task Creation

Create at least 4 tasks:

- Database Design
- Backend Development
- Frontend UI
- Testing

Task 3: Task Management

- Assign tasks to group members
- Add descriptions
- Set priorities and deadlines

Task 4: Progress Tracking

- Move tasks through statuses
- Use Board View to manage workflow

17 Submission Requirements

Students must submit:

- Screenshot of workspace structure
- Screenshot of task list
- Screenshot of Board View
- Evidence of task assignment

18 Common Mistakes

- Not assigning tasks
- Not updating task status
- Creating tasks without descriptions
- Not using priorities

19 Conclusion

In this lab, students learned how to:

- Use ClickUp for project management
- Organize tasks effectively
- Collaborate in teams
- Track project progress
