

SQL Important Notes

Select [Column Name]

From [table name]

DISTINCT

Select Distinct [Column Name] ///Distinct remove duplicate values

From [table name]

LIMIT

Select *

From [table name]

Limit 5; ///limit means 5 rows are showed as output

Or,

Limit 2,5 /// first 2 rows are removed, next 5 rows are showed, that's mean 3,4,5,6,7 no rows are shown

ORDER BY

Select [column name]

From [table name]

ORDER BY [column name] //by default order by shows ascending

For descending,

ORDER BY [column name] desc //now it shows descending

WHERE

Select [Column Name]

From [table name]

WHERE Mender='Male';

UPDATE

UPDATE [table name]

SET [column name]='value'

WHERE ID='1002'

Delete

DELETE FROM [table name]

WHERE ID=1002;

Upper & Lower

SELECT UPPER(column name)

FROM [table name];

AS

SELECT [column name] as [new_column name]

FROM [table name];

GROUP BY

SELECT customer, SUM(amount) //customer and amount both are column name

FROM Orders //Orders is table name

GROUP BY customer;

HAVING /// (having only works on groups but where works on rows)

SELECT customer, SUM(amount)

FROM Orders

GROUP BY customer

HAVING SUM(amount) > 900;

COUNT

SELECT subject, COUNT(*)

FROM Marks

GROUP BY subject;

SUM

SELECT subject, SUM(marks)

FROM Marks

GROUP BY subject;

AVG

SELECT subject, AVG(marks)

FROM Marks

GROUP BY subject;

MAX

SELECT subject, MAX(marks)

FROM Marks

GROUP BY subject;

MIN

SELECT subject, MIN(marks)

FROM Marks

GROUP BY subject;

SELECT [column names]

FROM [table name]

LEFT JOIN [second table]

ON employee.id=salary.id;
