

Assignment

Consider the webpage given below:

Tasks

ID	Name	Due time	Status
1	Go for a run	7:00 AM	Pending
2	Buy groceries	9:00 AM	Pending
3	Finish writing paper	11:00 AM	Pending
4	Call mom	12:00 AM	Pending

Add a new task

Task name:

Due date:

Remove a task

Task ID:

-
1. Implement the webpage.
 2. Create a proper database table with proper attributes and data types.
 3. The table must populated by adding each task from the webpage. Any task can be deleted by using the “Remove a task” feature.
 4. The table on the webpage must show all the tasks already added. Initially, it must be empty as tasks still need to be added.

The template HTML is provided [here](#).

You are free to use any language and any framework. Just make sure you are using MySQL to store and display data.

Export the database. Zip the database and assignment file and submit the ZIP file.

Deadline: 29 January 2026
